### **DETAILED ACTION**

1. This communication is in response to the Amendments and Arguments filed on 10/14/2009. Claims 1, 5, 6, 9, 12-14, 17-20, 22-24, and 29 are pending and have been examined, with claims 34-39 being newly added. The Applicants' amendment and remarks have been carefully considered and thus the application is in condition for allowance.
2. All previous objections and rejections directed to the Applicant's disclosure and claims not discussed in this Office Action have been withdrawn by the Examiner.

#### ***Information Disclosure Statement***

3. The information disclosure statement (IDS) submitted on 05/16/2008 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

#### ***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance: None of the prior art references either alone or in combination thereof teach the limitation of "the final part comprises a first temporal portion corresponding to a first relative pitch and a second temporal portion corresponding to a second relative pitch ... and wherein the different levels of pitch comprise at least two discrete categorical levels, and wherein each portion has a discrete categorical level associated with it."

The closest prior art of record Chen (US 5,751,905) teaches a speech recognition using toned phoneme. Particularly, Chen teaches a speech processing system receiving an input related to one of speech and process the input to provide an

output related to one of text (see Figure 6, input into microphone 600, the output of related information would have been obvious to Chen as the system is for use in speech recognition), the speech processing system (see col. 6, lines 26-36) accessing a module (see col. 3, lines 61-col. 4, lines 8, observations used within the toned phoneme system) derived from a phone set having a plurality of phones for a tonal language (see col. 4, lines 41-44, initials with glides and a second part (final)), wherein the tonal language comprises a plurality of different tones with different levels of pitch (see col. 4, lines 31-35, each tone has an associated pitch contour) the phones being used to model syllables used in the module (see col. 6, lines 42-45), the syllables having an initial part and final part (see col. 6, lines 42-45), wherein at least some of the syllables of the tonal language include a glide, the glide being embodied in the initial part (see col. 4, lines 42-43, glide is grouped with the initial) and wherein the final part comprises a first temporal portion corresponding to a first relative pitch and a second temporal portion corresponding to a second relative pitch, wherein the first portion and the second portion jointly and implicitly carry the tonal information (see col. 4, lines 10-13 and col. 4, lines 42-45, the pitch contour varies with time so the pitch changes relative to the portion of the phone i.e. if the phoneme is associated with a rising pitch contour, such a contour is representing a pitch increasing from a base value); and wherein the different levels of pitch comprises at least two categorical levels (see col. 4, lines 33-35, five types of tones), and wherein each portion has a categorical level associated with it (see col. 4, lines 10-15, pitch varies with time and represents a pitch contour. The contour consists of different level or values with respect to time). However, Chen fails to

teach the Final portion, which comprises two sections, each having an associated discrete categorical level as claimed since Chen teaches a single tone representation for the Final portion.

Chen ("Recognize Tone Languages using Pitch Information on the Main Vowel of each Syllable") teaches the use of a five level tone system for each tone type being characterized by levels. However, Chen fails to teach the Final portion, which comprises two sections, each having an associated discrete categorical level as claimed since Chen teaches a single tone representation for the Final portion.

Further, Hon et al. (US 5,680,510) teaches generation of sub syllable models for a tonal language, specifically Mandarin Chinese, where models for initials, finals, and the tone of the syllable is stored (see Abstract). However, Hon et al. fails to teach the Final portion, which comprises two sections, each having an associated discrete categorical level as claimed since Chen teaches a single tone representation for the Final portion.

Huang *et al.* ("Whistler: A trainable Text-to-Speech System", 1996) teaches the conversion of text to speech from learning methods of model parameters (see Abstract). However, Huang fails to teach the Final portion, which comprises two sections, each having an associated discrete categorical level as claimed since Chen teaches a single tone representation for the Final portion.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
